SST

temporary spiral staircase

Stairs are used on construction sites to facilitate communication between different levels.

The system comprises a base frame, intermediate module, exit step, or exit landing.

The construction is protected by hot-dip galvanization and is designed according to PN EN 12811 standard.

modular construction
allowing the product
customization for your needs

Possibility of compilation
up to 8 modules
(18440 mm)

730 mm
usable widths of stairs
and landings – 730 mm

assembly based on
screw connections

anchoring stairs to
the structure using
stabilizing consoles

compliance with
the standard
PN-EN 12811

Acceptable load unfolded

Acceptable load focused

8 MODULES
18440 mm (max H)

Base frame

Intermediate module
(H 2280 mm)

Barrier

Stabilising consoles

Top module barrier

Exit landing

OPTIONAL SOLUTIONS

Exit step

Alternative options for mounting a exit step

Optional toe board

Optional assembly of another exit platforms

Additional level adjustment options for stair exit using TAS steps. Mounting of a platform without slab support with the possibility of lateral exit
